robertgambee@gmail.com • (914) 672–3352 • Boston, MA

AI Research Engineer dedicated to building safe, beneficial AI systems

Core Competencies

- Proven ability to rapidly master new technologies and adapt in response to evolving needs
- Expertise at driving complex projects from inception to production
- Talent for balancing big-picture strategic thinking and detail-oriented execution
- Experience designing systems to be reliable, scalable and maintainable
- Passion for leveraging technical skills to create meaningful positive impact

Software Skills

Proficient
- Python
- JavaScript, TypeScript, React
- C++
- Git, Jira
- AI coding assistants

Experienced
- PyTorch, scikit-learn
- SQL, PostgreSQL, BigQuery
- Docker
- Bash
- GitHub Actions

Familiar
- Go
- Rust
- Amazon Web Services
- Google Cloud Platform
- Make, CMake

Professional Experience

FutureSearch: Startup using AI for research and forecasting — 2025 to Present

AI Research Engineer

Responsibilities
- Evaluate and enhance capabilities of AI research agents
- Work throughout the stack to rapidly iterate on product ideas
- Log data and build dashboards to monitor performance and costs

Technical Projects
- AI research agent capabilities — 2025 to Present
  - Developed workflow to estimate probability of uncertain claims
  - Contributed to workflow which leveraged multiple agents to solve especially hard problems
  - Wrote and maintained a set of evaluations focused on fact checking
  - Optimized tool for reading webpages to improve reliability
- Web application for orchestrating AI research agents to answer hard questions at scale — 2025 to Present
  - Owned features for importing, viewing and exporting tabular data
- Web application to present AI predictions on investment returns — 2025
  - Developed app from concept through proof-of-concept, ready for external feedback

Formlabs: Building industry-leading, professional 3D printers — 2015 to 2025

Systems Integration Engineer III

Responsibilities
- Architected software which was maintainable, scalable and testable
- Owned key printer systems for the entire product cycle, driving them from inception to public release
- Rapidly shifted priorities and gain skills in response to project needs
- Understood complex interactions between printer systems, keeping both details and big picture in mind
- Optimized for printer reliability through robust design and failure mode prediction
- Analyzed and visualized printer data to answer pressing questions and inform business decisions
- Mentored junior team members to foster their technical abilities
- Facilitated communication between engineering teams and across departments

Technical Projects

- Senior embedded developer for Form 4 and Form 4L 2021 to 2025
  - Thoughtfully crafted powerful yet understandable API to control all aspects of product functionality
  - Comprehensively audited API for security vulnerabilities and coordinated plan to address them
  - Advised architectural decisions for embedded and desktop software
- Data management on user-replaceable components for Form 4 and Form 4L 2023 to 2024
  - Designed a unified architecture for all components, agnostic to interface and data format
  - Wrote extensive validation checks to be robust to failures when reading or writing
  - Secured system against counterfeiting to protect company's primary revenue stream
  - Thoroughly tested all code with automated checks
- Print preparation routine for Form 4 and Form 4L 2021 to 2024
  - Sped up routine by a factor of 5 to 10 compared to previous product, vastly improving user experience
  - Wrote predictive checks to give user advance warning of issues and avoid interrupting prints
  - Implemented specification for how to handle over 50 possible errors
- Prototype firmware for early iterations of Form 4 2021 to 2022
  - Independently developed prototype firmware in Python to support crucial conceptual testing
  - Balanced competing desires for flexibility and stability using a modular design
  - Rapidly responded to feature requests and bug reports, addressing them in days if not hours
- Dashboard for plotting live sensor data 2021
  - Independently developed over four days during company hackathon
  - Wrote backend in Go, wrote frontend in JavaScript, streamed data via WebSockets
  - Recognized by the CEO in a company-wide email as one of the most impressive projects that year

Achievements

- Recipient of Formlabs' Perform Award, which recognizes top 10% of employees 2020 and 2023

Volunteer Experience

AI Governance and Safety Canada 2024

- Designed and implemented flexible system for scraping information relevant to the AI safety community
- Leveraged state-of-the-art AI language model to robustly scrape many sites
- Initially developed to find upcoming events, but can be extended to other types of content, e.g. publications
- Created automated workflow using GitHub Actions to run scraper and publish output to database
- Overhauled collection of introductory AI resources with updated list covering many topics and formats

Personal Projects

Independent AI Research 2023

Reproduction of "The Capacity for Moral Self-Correction in Large Language Models" by Ganguli et al.

- Loaded and processed tens of thousands of samples from three different datasets
- Submitted API requests asynchronously, with automatic retries and rate limiting
- Analyzed bias in model responses according to three different metrics
- Compared and contrasted results to demonstrate influence of RLHF training vs. prompt engineering

Chronicle 2023

Web app to keep track of how one spends one's time

- Used Django framework to manage HTTP requests and access SQLite database
- Presented data as a table for sorting and filtering, as well multiple charts for visualization
- Set up automated test and deployment workflows using GitHub Actions

SCAFFOLD 2023

Completed as part of AI Safety Camp (3 person team plus advisor)

- Built React web app to generate feedback on one's research ideas using GPT
- Fine tuned model to make its responses more relevant to AI safety research

Monson; Permittivity effects of particle agglomeration in ferroelectric ceramic-epoxy composites using finite element modeling. AIP Advances 1 December 2018; 8 (12): 125020. https://doi.org/10.1063/1.5053442

Education

Harvey Mudd College, Claremont, CA
Bachelor of Science in Engineering with High Distinction 2011 to 2015

- GPA: 3.8
- Inducted into Tau Beta Pi, national engineering honor society 2014
- Recognized on Dean's List of top performing students 2012 to 2015

Continuing Education

- NYU's Deep Learning with Prof. Yann LeCun 2022
- Google's Machine Learning Crash Course 2022
- fast.ai's Practical Deep Learning for Coders 2022

Undergraduate Projects

SpaceX, Hawthorne, CA & Harvey Mudd College 2014 to 2015
Recoverable Flight Data Recorder (5 person team)

- Designed housing and selected materials to protect electronics from rocket explosion
- Built and tested prototypes according to SMC-S-016 and other specifications
- Contributed to software for receiving flight data over UDP and saving to SD card

Academic Research, Harvey Mudd College 2014 to 2015
Gas Permeation Across Nanocomposite Polymer Membranes (5 to 8 person team)

- Performed gas permeation experiments on synthesized membranes
- Ran and analyzed molecular simulations containing over ten thousand atoms each
- Wrote grant proposal for Amazon EC2 resources that decreased runtime by an order of magnitude

Sandia National Laboratories, Albuquerque, NM & Harvey Mudd College 2013 to 2014
Measurement of Barium Titanate Nanoparticle Permittivity (5 person team)

- Developed analytical and numerical models for interpretation of experimental data
- Presented work at Materials Research Society meeting as invited speaker
- Project findings were later published in American Institute of Physics Advances
