Experienced software developer passionate about improving the world for future generations

Professional Experience

Formlabs: Building industry-leading, professional 3D printers in Somerville, MA 2015 to Present
Systems Integration Engineer III

Responsibilities

- Autonomously tackle challenging problems at the interface between hardware and software
- Rapidly shift priorities and gain skills in response to project needs
- Own key printer systems for the entire product cycle, driving them from inception to public release
- Understand complex interactions between printer systems, keeping both details and big picture in mind
- Optimize for printer reliability through robust design and failure mode prediction
- Analyze and visualize printer data to answer pressing questions and inform business decisions
- Mentor junior team members to foster their technical abilities
- Facilitate communication between engineering teams and across departments

Leadership Experience

- Project lead of Formlabs' most widely-used internal tool, which manages print settings 2023 to Present
 - Understand the workflows of the dozens of engineers who use this system daily to refine hundreds of settings for more than 30 resins
 - Regularly discuss improvements with stakeholders and transform them into concrete specifications
 - Coordinate across multiple teams to complete improvements amid competing priorities
 - Improvements include search box, tags for grouping related settings, and intuitive indication of links between settings

Technical Projects

- Senior embedded developer for Form 4 and Form 4L 2021 to Present
 - Thoughtfully crafted powerful yet understandable API to control all aspects of product functionality
 - Comprehensively audited API for security vulnerabilities and coordinated plan to address them
 - Advised architectural decisions for embedded and desktop software
- Data management on user-replaceable consumables for Form 4 and Form 4L 2023 to Present
 - Designed a unified architecture for all consumables, agnostic to interface and data format
 - Wrote extensive validation checks to be robust to failures when reading or writing
 - Secured system against counterfeiting to protect company's primary revenue stream
 - Thoroughly tested all code with automated checks
- Print preparation routine for Form 4 and Form 4L 2021 to Present
 - Sped up routine by a factor of 5 to 10 compared to previous product, vastly improving user experience
 - Wrote predictive checks to give user advance warning of issues and avoid interrupting prints
 - Implemented specification for how to handle over 50 possible errors
- Prototype firmware for early iterations of Form 4 2021 to 2022
 - Independently developed prototype firmware in Python to support crucial conceptual testing
 - Balanced competing desires for flexibility and stability using a modular design
 - Rapidly responded to feature requests and bug reports, addressing them in days if not hours
- Dashboard for plotting live sensor data 2021
 - Independently developed over four days during company hackathon
 - Wrote backend in Go, wrote frontend in JavaScript, streamed data via WebSockets
 - Recognized by the CEO in a company-wide email as one of the most impressive projects that year

Achievements

- Recipient of Formlabs' Perform Award, which recognizes top 10% of employees 2020 and 2023

Software Skills

Proficient

- Python
 - NumPy, SciPy, Pandas, Matplotlib
 - asyncio, Django, Twisted
- C++
- Git
- Jira

Experienced

- PyTorch, scikit-learn
- JavaScript, TypeScript, React
- HTML, CSS, Bootstrap
- SQL, BigQuery, Grafana
- Bash
- GitHub Actions

Familiar

- Go
- Rust
- Docker
- Amazon Web Services
- Google Cloud Platform
- Make, CMake

Volunteer Experience

AI Governance and Safety Canada

2024 to Present

- Designed and implemented flexible system for scraping information relevant to AI safety
- Leveraged state-of-the-art AI language models to robustly scrape many sites
- Initially developed to find upcoming events, but can be extended to other types of content, e.g. publications
- Created automated workflow using GitHub Actions to run scraper and publish output to database
- Overhauled list of introductory AI resources with updated list covering many fields and formats

Personal Projects

Independent AI Research

2023

Reproduction of “The Capacity for Moral Self-Correction in Large Language Models” by Ganguli et al.

- Loaded and processed tens of thousands of samples from three different datasets
- Submitted API requests asynchronously, with automatic retries and rate limiting
- Analyzed bias in model responses according to three different metrics
- Compared and contrasted results to demonstrate influence of RLHF training vs. prompt engineering

Chronicle

2023

Web app to keep track of how one spends one's time

- Used Django framework to manage HTTP requests and access SQLite database
- Presented data as a table for sorting and filtering, as well multiple charts for visualization
- Set up automated test and deployment workflows using GitHub Actions

SCAFFOLD

2023

Completed as part of AI Safety Camp (3 person team plus advisor)

- Built React web app to generate feedback on one's research ideas using GPT
- Fine tuned model to make its responses more relevant to AI safety research

Advent of Code

2018 to 2021

Annual set of programming challenges

- Solved problems in different language each year teach myself something new

Education

Harvey Mudd College, Claremont, CA

Bachelor of Science in Engineering with High Distinction

2011 to 2015

- GPA: 3.8
- Inducted into Tau Beta Pi, national engineering honor society
- Recognized on Dean's List of top performing students

2014

2012 to 2015

Continuing Education

- NYU's Deep Learning with Prof. Yann LeCun
- Google's Machine Learning Crash Course
- fast.ai's Practical Deep Learning for Coders

2022

2022

2022
