Robert G. Gambee

Experienced software engineer passionate about improving the world for future generations

Professional Experience

Formlabs: Building industry-leading, professional 3D printers in Somerville, MA Systems Integration Engineer III

2015 to Present

Responsibilities

- Architect software which is maintainable, scalable and testable
- Own key printer systems for the entire product cycle, driving them from inception to public release
- Rapidly shift priorities and gain skills in response to project needs
- Understand complex interactions between printer systems, keeping both details and big picture in mind
- Optimize for printer reliability through robust design and failure mode prediction
- Analyze and visualize printer data to answer pressing questions and inform business decisions
- Mentor junior team members to foster their technical abilities
- Facilitate communication between engineering teams and across departments

Leadership Experience

• Project lead of Formlabs' most widely-used internal tool, which manages print settings

2023 to 2024

- Understand the workflows of the dozens of engineers who use this system daily to refine hundreds of settings for more than 30 resins
- Regularly discuss improvements with stakeholders and transform them into concrete specifications
- o Coordinate across multiple teams to complete improvements amid competing priorities
- Improvements include search box, tags for grouping related settings, and intuitive indication of links between settings

Technical Projects

• Senior embedded developer for Form 4 and Form 4L

2021 to Present

- $\circ\,$ Thoughtfully crafted powerful yet understandable API to control all aspects of product functionality
- Comprehensively audited API for security vulnerabilities and coordinated plan to address them
- Advised architectural decisions for embedded and desktop software
- Data management on user-replaceable components for Form 4 and Form 4L

2023 to 2024

- $\circ\,$ Designed a unified architecture for all components, agnostic to interface and data format
- Wrote extensive validation checks to be robust to failures when reading or writing
- Secured system against counterfeiting to protect company's primary revenue stream
- Thoroughly tested all code with automated checks
- Print preparation routine for Form 4 and Form 4L

2021 to 2024

- Sped up routine by a factor of 5 to 10 compared to previous product, vastly improving user experience
- Wrote predictive checks to give user advance warning of issues and avoid interrupting prints
- Implemented specification for how to handle over 50 possible errors
- Prototype firmware for early iterations of Form 4

2021 to 2022

- Independently developed prototype firmware in Python to support crucial conceptual testing
- Balanced competing desires for flexibility and stability using a modular design
- Rapidly responded to feature requests and bug reports, addressing them in days if not hours
- Dashboard for plotting live sensor data

2021

- Independently developed over four days during company hackathon
- Wrote backend in Go, wrote frontend in JavaScript, streamed data via WebSockets
- Recognized by the CEO in a company-wide email as one of the most impressive projects that year

Achievements

• Recipient of Formlabs' Perform Award, which recognizes top 10% of employees

2020 and 2023

Software Skills

Proficient

- Python
 - NumPy, SciPy, Pandas, Matplotlib
 - o asyncio, Django, Twisted
- C++
- Git, Jira
- AI coding assistants

Experienced

- PyTorch, scikit-learn
- JavaScript, TypeScript, React
- HTML, CSS, Bootstrap
- SQL, BigQuery, Grafana
- Protobuf
- Bash
- GitHub Actions

Familiar

- Go
- Rust
- Docker
- Amazon Web Services
- Google Cloud Platform
- Make, CMake

Volunteer Experience

AI Governance and Safety Canada

2024 to Present

- Designed and implemented flexible system for scraping information relevant to the AI safety community
- Leveraged state-of-the-art AI language model to robustly scrape many sites
- Initially developed to find upcoming events, but can be extended to other types of content, e.g. publications
- Created automated workflow using GitHub Actions to run scraper and publish output to database
- Overhauled collection of introductory AI resources with updated list covering many topics and formats

Personal Projects

Independent AI Research

2023

Reproduction of "The Capacity for Moral Self-Correction in Large Language Models" by Ganguli et al.

- Loaded and processed tens of thousands of samples from three different datasets
- Submitted API requests asynchronously, with automatic retries and rate limiting
- Analyzed bias in model responses according to three different metrics
- Compared and contrasted results to demonstrate influence of RLHF training vs. prompt engineering

Chronicle 2023

Web app to keep track of how one spends one's time

- Used Django framework to manage HTTP requests and access SQLite database
- Presented data as a table for sorting and filtering, as well multiple charts for visualization
- Set up automated test and deployment workflows using GitHub Actions

SCAFFOLD 2023

Completed as part of AI Safety Camp (3 person team plus advisor)

- Built React web app to generate feedback on one's research ideas using GPT
- Fine tuned model to make its responses more relevant to AI safety research

Advent of Code 2018 to 2021

Annual set of programming challenges

• Solved problems in different language each year teach myself something new

Education

Harvey Mudd College, Claremont, CA

Bachelor of Science in Engineering with High Distinction

2011 to 2015

- GPA: 3.8
- Inducted into Tau Beta Pi, national engineering honor society

2014

• Recognized on Dean's List of top performing students

2012 to 2015

Continuing Education

• NYU's Deep Learning with Prof. Yann LeCun

2022

• Google's Machine Learning Crash Course

2022

• fast.ai's Practical Deep Learning for Coders

2022
